
Problem to do relationship on Asset Module using C

Posted by mvp - 2009/03/23 08:23

Hello Group,

I have 4 Remedy Servers running with Server Group, and the CMDB module is installed in just 1 server. When I try to do a relationship on Asset Module on Server with CMDB installed, it's work fine, but when I try to do the relationship in the other 3 servers, it isn't work.

The problem occur with this filter "CMDB:Instance:InvokeCMDBEngine01".

Are there someone idea or experiece about this kind of problem?

Thank you
Marcello.
